INDEX

In functie de modalitate in care sunt taiate, placile din travertin pot fi:

-Cross Cut

-Vein Cut

In cazul placilor Cross Cut suprafata plana este taiata perpendicular pe venaturile prezente
In cazul placilor Vein Cut suprafata plana este taiata paralel cu venaturile existente.

Dimensiune placi seturi:

·3D

-10X10X1 CM

-10X20X1 CM

-20X20X1 CM

·Mini Set

-10x10x1 CM

-10x20x1 CM

PROFIL

FINISAJE PIATRA NATURALA

Lustruit

Finisajul Lustruit este intalnit mai mult la placile din Marmura si Granit deoarece acestea au in componenta lor cristale care in urma lustruirii mecanice transforma suprafata intr-una plana si stralucitoare. Finisajul lustruit este cel care reuseste sa scoata in evidenta cel mai bine culoarea pietrei, oferind suprafetei un aspect ce reflecta lumina intr-un mod aparte. Atunci cand alegem pentru casa noastra piatra naturala cu finisaj lustruit va trebui sa tinem seama de spatiul in care o vom monta. In spatiile cu umiditate crescuta, pentru a se evita alunecarile si accidentarile, este recomandat a nu se utiliza acest finisaj mai ales pentru placarea pardoselilor.

Lustruit si Nechituit

Finisajul Lustruit si Nechituit este unul din finisajele intalnite in mare parte la placile din Travertin. Acest material prezinta pe suprafata lui imperfectioni, respectiv goluri, care raman neacoperite, aplicandu-se in final doar luciul. Aspectul final al suprafetelor lustruite si nechituite va fi acelasi cu cel al finisajului lustruit, insa va pastra totodata si amprenta finisajului natural, neprelucrat.

Periat

Finisajul Periat este unul dintre acele finisaje care pastreaza senzatia unui aspect natural neprelucrat, insa suprafata sa este texturata cu ajutorul unor instrumente specializate, astfel incat materialele sa capate un aspect neted, placut la atingere. Materialele cu finisaj periat pot fi utilizate atat in amenajarea interioara, cat si in cea exterioara. Acest finisaj il intalnim la pietrele naturale precum: Travertin, Marmura, Granit sau Calcar.

Slefuit

Finisajul Slefuit este intalnit cu precadere la Travertin, acesta fiind o roca sedimentara poroasa de calcar care este formata prin combinatia de caldura si presiune a izvoarelor termale naturale. Finisajul slefuit ofera placilor din piatra naturala margini uniforme, taiate drept sau tesit. El poate fi intalnit si la placile de Marmura si nu numai. Fiind un finisaj mat, se poate monta fara probleme la interior in zone cu umiditate crescuta: bai, bucatarii, sau chiar si la exterior pe terase, pe marginea sau de jur imprejurul piscinei si a zonelor de relaxare.

Slefuit si Chituit

Finisajul Slefuit si Chituit este intalnit, in mare parte, la placile din Travertin care nu sunt compacte si prezinta pe intreaga suprafata mici goluri sau orificii. Aceste goluri/orificii sunt umplute cu chit in nuante asemanatoare materialului, astfel ca in final vom avea o suprafata complet neteda si usor de intretinut sau curatat.

FINISAJE PIATRA NATURALA

Slefuit si Nechituit

Finisajul Slefuit si Nechituit, la fel ca si cel Slefuit si Chituit, este intalnit in mare parte la placile din Travertin. In cazul finisajului Slefuit si Nechituit imperfectiunile, respectiv golurile de pe suprafata materialului, nu sunt acoperite cu chit, piatra pastrandu-si astfel naturalitatea.

Antichizat

Finisajul Antichizat este unul dintre cele mai populare finisaje atunci cand vine vorba de pietre naturale precum Travertinul. Acest finisaj rezulta in urma procesului prin care mai multe bucati de piatra naturala sunt taiate la aceeasi dimensiune si sunt puse intr-un butoi de plastic, sau unul acoperit cu cauciuc, impreuna cu pietris abraziv si apa. Procesul dureaza intre 3 si 5 saptamani, perioada in care pietrele se macina cu ajutorul pietrisului pana cand acestea capata un aspect uzat si o suprafata moale si neteda. Acest finisaj se poate utiliza atat la interior cat si la exterior, fiind o alegere excelenta pentru partea de jos a dusului sau de jur imprejurul cazilor.

Fiamat

Finisajul Fiamat este intalnit cel mai des la Granit. Fiamarea are loc in urma unui proces de ardere a suprafetei materialului la temperaturi foarte ridicate. Ca urmare a acestui proces, materialul va capata un aspect rugos, cu un efect antiderapant puternic. Este folosit cu preponderenta la exterior pentru placarea treptelor, terasei si in general, oriunde se doreste o suprafata antiderapanta.

Scapitat

Split Face sau finisajul Scapitat este un termen larg utilizat in industria materialelor de constructii si se refera la orice material care a fost spart pentru a expune suprafata cea mai dura. Acest finisaj il intalnim cel mai des la placile din Travertin si Granit. Datorita faptului ca placile sunt usor denivelate/sparte, montajul lor se va face mai mult pe suprafete verticale. Un mare beneficiu al placilor cu finisaj scapitat este legat de faptul ca sunt ieftine si usoare de montat. Finisajul scapitat este utilizat in prezent in proiecte de interior si exterior pentru a da un aspect cat mai natural propriilor locuinte.

Margini Sparte

Cand vorbim de Margini Sparte ne referim in mare parte la placile din Travertin. Placile cu o astfel de prelucrare au margini aspre, neprelucrate in locul marginilor drepte sau tesite cum au majoritatea celorlalte placi. Aceasta prelucrare a marginilor se poate face atat manual, cat si cu ajutorul utilajelor de prelucrare. Marginea sparta se poate aplica oricarui finisaj insa se completeaza cel mai bine cu finisajul antichizat si periat.
